## **DETAILED ACTION**

### ***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: Methods for inducing G-CSF secretion, inducing proliferation or differentiation of bone marrow or white blood cells, and treatment of related diseases or disease states using an adenosine A3 receptor agonist (A3RAg), an adenosine A1 receptor agonist (A1RAg), an adenosine A2 receptor agonist (A2RAg) and/or an adenosine A2 receptor antagonist (A2RAn), wherein the agonist/antagonist includes (a) purine derivatives (without a sugar moiety), (b) nucleoside derivatives wherein Y is oxygen or sulfur and (c) nucleoside derivatives wherein Y is carbon.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1623

The following claim(s) are generic: Claims 1-56.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The special technical feature of Species (a) is that the agonist/antagonist is directed to a purine derivative (without a sugar moiety). The special technical feature of Species (b) is that the agonist/antagonist is directed to a nucleoside derivative wherein Y is oxygen or sulfur. Species (c) is directed methods using a purine derivative bound to a carbocycle, i.e. wherein Y is carbon, a technical feature distinct from the purine derivatives of Species (a) and the natural nucleoside derivatives of Species (b).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Josephine Young whose telephone number is (703) 605-1201. The examiner can normally be reached on Monday through Friday, 9:00 a.m. to 6:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James O. Wilson can be reached at (703) 308-4624. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-3014 for regular communications and (703) 872-9307 for After Final communications.
